Authorized: GCSD \_\_\_\_\_ Date \_\_\_\_\_

# FIRE SPRINKLER SYSTEMS

All **NEW** construction in California requires Fire Sprinklers be installed. All fire sprinkler systems must be designed by an engineer and approved by the County Fire and Building Departments. The designing engineer will determine the required fire flow (volume of water) needed for the system and specify what size water meter the new connection will need. The District is not involved in determining the meter size or required fire flow.

1. What information does the system designer need?

a. Static PSI \_\_\_\_\_

b. Size of Main \_\_\_\_\_

c. Size of Service Tube \_\_\_\_\_

d. Other \_\_\_\_\_

2. Will the system have Anti-Freeze in any portion? YES/NO

3. If no Anti-Freeze in system, will the system be connected to an active plumbing fixture such as a master bath area? If so, please provide plumbing plans detailing connection.

---

---

---

4. Does the property have a well? YES/NO

Once any requested information is provided to the system designer they will inform the District on the requested meter size. Please note a Backflow Prevention Device, at an additional cost plus annual testing may be required.
